## Executive Summary

**Call and Episode Volume:** In May 2011, **211 received 1408 calls** including 1095 calls (78%) routed to EMPS providers and 313 calls (22%) handled by 211 (e.g., calls for other information or resources, calls transferred to 911). The percent distribution of calls routed to EMPS providers and those handled by 211 remains fairly consistent from month to month.

Among the **1095 episodes of care** generated in May, episode volume ranged from 134 episodes (Eastern service area) to 295 episodes (Hartford service area). The statewide average service reach per 1,000 children this month was 1.30, with service area rates ranging from 1.06 (Southwestern) to 1.80 (Hartford) relative to their specific child populations. Additionally, the number of episodes generated relative to the number of children in poverty in each service area yielded a statewide average poverty service reach rate of 2.90 per 1,000 children in poverty, with service area rates ranging from 1.89 (New Haven) to 5.18 (Eastern).

**Mobility:** **Statewide mobility was 92.0% this month**, compared to 91.2% (April '11), 92% (March '11), 89.9% (February '11) and 85.7% (January '11). The lowest mobility percentage was 86.9% (New Haven) and the highest was 96.0% (Hartford). There was some variability in mobility percentages among individual providers (85% to 100%).

**Response Time:** Statewide, this month **87% of mobile episodes received a Face-to-face response in 45 minutes or less**, which is 11% higher than it was a year ago in May of 2010 (76%). Performance on this indicator ranged from 74% (Western) to 97% (Eastern). In addition, the statewide median mobile response time this month was 29 minutes, with all six service areas demonstrating a median mobile response time of 31 minutes or less. These data strongly suggest that EMPS service providers are offering timely responses to crises in the community.

**Length of Stay:** Statewide, among discharged episodes, 8% (current month) and 9% (cumulative) of Phone Only episodes exceeded one day, 26% (current month) and 29% (cumulative) of Face-to-face episodes exceeded five days, and **8% (current month) and 11% (cumulative) of Plus Stabilization Follow-up episodes exceeded 45 days.**

Statewide, the median LOS for open episodes of care with a Crisis Response of Phone Only was 51 days (n=19) and ranged from 20 days (Hartford) to 119.5 days (Southwestern). Statewide, the median LOS for a Crisis Response of Face-to-face was 15 days (n=122) and ranged from 1.5 days (Eastern) to 43 days (New Haven). For the Plus Stabilization Follow-up Crisis Response, the statewide median LOS was 18 days (n=275) with a range from 11 days (Hartford) to 33.5 days (Southwestern). This tells us that families remain open for services beyond the benchmarks for some crisis response categories. Cases that remain open for services for long periods of time can impact responsiveness as call volume continues to increase, and can compromise accurate and timely data entry practices.

**Data Quality Monitoring:** The Worker version of the Ohio Scales was completed more consistently than the Parent version. This month statewide completion rates for intake Ohio Scales were: Worker Problem Scale (92%), Parent Problem Scale (66%), Worker Functioning Scale (92%), and Parent Functioning Scale (65%). The statewide completion rate for discharge Ohio Scales this month were: Worker Problem Scale (87%), Parent Problem Scale (29%), Worker Functioning Scale (87%), and Parent Functioning Scale (29%). Completion of the Ohio Scales is significantly lower than in previous months and will be an area for improvement in the future.

**Community Outreach:** At the end of Q3 FY11, three of the fifteen EMPS providers were required to complete four outreaches per month; they had a service reach rate below 2.0 episodes per 1,000 children (Mid-Fairfield Child Guidance, Wellpath-Danbury, Wellpath-Torrington). Two providers (Wellpath-Danbury and Wellpath-Torrington) met the requirement this month.

Eight of twelve providers (CHR-Manchester, UCFS/CHR-Mansfield, UCFS-Norwich, Wheeler-Meriden, Bridges, Child Guidance of Southern CT, Child and Family Guidance Center-formerly CGCGB, and Wellpath-Waterbury) met the requirement of two outreaches this month.

Figure 30. Percentage of Ohio Scales Collected at Discharge by Provider

## Section VIII: Community Outreach Efforts

\* Formal outreach refers to: 1) In person presentations lasting 30 minutes, preferably more, using the EMPS PowerPoint slides and including distribution to attendees of marketing materials and other EMPS resources; 2) Outreach presentations that are in person that include workshops, conferences, or similar gatherings in which EMPS is discussed for at least an hour or more; 3) Outreach presentations that are not in person which may include workshops, conferences, or similar gatherings in which the EMPS marketing video, banner, and table skirt are set up for at least 2 hours with marketing materials made available to those who would like them; 4) The EMPS PIC considers other outreaches for inclusion on a case-by-case basis, as requested by EMPS providers.

## **Appendix A: Description of Calculations**

### ***Section I: Primary EMPS Performance Indicators***

- Figure 1 tabulates the total number of calls by service area by 211-only, 211-EMPS, or registered calls.
- Figure 2 calculates the total number of EMPS episodes for the specified time frame for the designated service area.
- Figure 3 shows the number of children served by EMPS per 1,000 children. This is calculated by summing the total number of episodes for the specified service area multiplied by 1,000; this result is then divided by the total number of youth in that particular service area as reported by U.S. Census data.
- Figure 4 determines the number of children served by EMPS that are TANF eligible out of the total number of children in that service area that are eligible for free or reduced lunch<sup>1</sup>. This is calculated by selecting only those episodes that are coded as face-to-face or crisis response stabilization plus follow-up divided by the total number of youth receiving free or reduced lunch<sup>1</sup> in that service area.
- Figure 5 isolates the total number of episodes that 211 recommended as mobile or deferred mobile. This number of episodes is then divided by the total number of episodes where the actual EMPS response was either mobile or deferred mobile. Multiply that result by 100 to get the percentage.
- Figure 6 isolates the total number of episodes with an actual EMPS response of mobile and a response time less than 45 minutes divided by the total number of episodes with an actual EMPS response of mobile (response time is calculated by subtracting the First Contact Date Time from the Call Date Time. In this calculation, 10 minutes is subtracted from the original response time to account for the average 211 call).

### ***Section II: Episode Volume***

- Figure 7 tabulates the total number of calls by service area by 211-Only, 211-EMPS or Registered Calls.
- Figure 8 shows the 211 disposition of all calls received.
- Figure 9 shows the 211 disposition of EMPS response categorized by provider.
- Figure 10 shows the number served per 1,000 children by provider, calculated the same as Figure 3.
- Figure 11 is a stacked bar chart that represents the percent of episodes that are coded as either a phone only, face-to-face, or plus stabilization follow-up crisis response. Each percentage is calculated by counting the number of episodes in the respective category (i.e., phone only) divided by the total number of episodes coded for crisis response for that specified service area.
- Figure 12 calculates the same percentage as Figure 11 and is shown by provider.

### ***Section III: 211 Recommendations and EMPS Response***

- Figure 13 shows the percentage of the 211 recommended responses (i.e. mobile, deferred mobile, non-mobile) for all EMPS Responses by provider. Calculated by taking the count of the 211 Recommended Response Mode (i.e. mobile, deferred mobile, non-mobile) divided by the total count of episodes with a 211 disposition of EMPS Response then multiply that by 100 to get the percentage.
- Figure 14 shows a percentage of the actual EMPS response mode (i.e., mobile, deferred mobile, non-mobile) for the total EMPS Response episodes by provider. Calculated by taking the count of the actual EMPS Response Mode (i.e. mobile, deferred mobile, non-mobile) divided by the total count of episodes with a 211 disposition of EMPS Response then multiply that by 100 to get the percentage.
- Calculation for Figure 15: Count 211 recommended mobile where actual response was non-mobile (separately for deferred mobile) divided by total count of 211 recommended mobile, multiply that number by 100 to get the percentage.
- Calculation for Figure 16: Count 211 recommended non-mobile where actual response was mobile (separately for deferred mobile) divided by total count of 211 recommended non-mobile, multiply that number by 100 to get the percentage.
- Figure 17 is the same graph as Figure 5.
- Figure 18 uses the same calculation as Figure 5.

<sup>1</sup> United States Department of Agriculture, Food and Nutrition Service, "Eligibility Manual for School Meals, January 2008", <http://www.fns.usda.gov/cnd/Lunch/>.

## Section IV: Response Time

---

- Figure 19 is the same graph as shown in Figure 6.
- Figure 20 uses the same calculation as Figures 6 & 19 and is shown by provider.
- Figure 21 arranges response times for episodes coded as EMPS response mode-mobile in ascending order by service area and shows the response time in the middle.
- Figure 22 uses the same calculation as Figure 21 and is categorized by provider.
- Figure 23 arranges response times for episodes coded as EMPS response mode-deferred mobile in ascending order by service area and shows the response time in the middle.
- Figure 24 uses the same calculation as Figure 23 and is categorized by provider.

## Section V: Emergency Department Referral Type

---

- Figure 25 shows the number of ED referrals (i.e. routine follow-up or in-patient diversion) by service area.
- Figure 26 is calculated by taking the count of ED referrals for the specified service area divided by total number of EMPS response episodes for that service area and multiplying that number by 100 to get the percentage.
- Figures 27 and 28 use the same calculations as Figures 25 and 26 respectively, and are shown by provider.

## Section VI: Length of Stay

---

- Table 1 shows the mean, median, and percentage of episodes exceeding the LOS benchmarks, statewide, by service area, and by provider. Discharged episodes are broken into the various Crisis Response categories (Phone Only, Face-to-face and Plus Stabilization Follow-up) for two separate periods of time: 1) the current reporting period and 2) cumulatively since January 1, 2010.
- Table 2 shows the total number of episodes used to calculate the mean, median and percent in Table 1.
- Table 3 shows the same Crisis Response categories for episodes still in care as of January 1, 2010 to the end of current reporting period. To calculate length of stay data, an episode end date is needed. The episodes still in care do not have episode end dates at the time the data is download. Therefore, an episode end date equal to the last day of the current reporting period was used to calculate length of stay.

## Section VII: Data Quality Monitoring

---

- Figure 29 calculates the percent of Ohio intake scales by dividing actual over expected. The numerator is calculated by counting the number of Ohio intake scales for those episodes coded as crisis response face-to-face OR plus stabilization follow-up AND an actual EMPS response of mobile OR deferred mobile. This is divided by the total number of expected Ohio intake scales which is calculated by counting the total number of episodes coded as crisis response face-to-face OR plus stabilization follow-up AND episodes coded with an actual EMPS response of mobile OR deferred mobile.
- Figure 30 calculates the percent of Ohio discharge scales by dividing actual over expected. The numerator is calculated by counting the number of Ohio discharge scales for those episodes coded as crisis response plus stabilization follow-up AND an actual EMPS response mode of mobile OR deferred mobile AND has an episode end date. This is divided by the total number of expected Ohio discharge scales which is calculated by counting the total number of episodes that are coded as crisis response plus stabilization follow-up AND

## Section VIII: Provider Community Outreach

---

- Figure 31 shows a count of the number of times a provider performed formal community outreach during the current month.
