Executive Summary

Fiscal Year 2016 Annual Report
Executive Summary

Mobile Crisis Intervention Services (Mobile Crisis), formerly known as the Emergency Mobile Psychiatric Services, is a mobile intervention service for children and adolescents experiencing a behavioral or mental health crisis. Mobile Crisis is funded by the Connecticut Department of Children and Families (DCF) and is accessed by calling 2-1-1. The statewide Mobile Crisis network is comprised of more than 150 trained mental health professionals that can respond immediately by phone or within 45 minutes in person when a child is experiencing an emotional or behavioral crisis. The purpose of the program is to serve children in their homes and communities, reduce the number of visits to hospital emergency rooms, and divert children from high-end interventions (such as hospitalization or arrest) if a lower level of care is a safe and effective alternative. Mobile Crisis is implemented by six primary contractors, each of whom may have satellite offices or subcontracted agencies. This Fiscal Year, a total of 14 Mobile Crisis sites collectively provided coverage for every town and city in Connecticut.

The Mobile Crisis PIC is housed at the Child Health and Development Institute (CHDI) and was established to support the implementation of a best practice model of Mobile Crisis services for children and families. Since August 2009, the PIC has provided data analysis, reporting, and quality improvement; standardized workforce development; and standardized practice development. The PIC is responsible for submitting monthly, quarterly, and annual reports that summarize findings on key indicators of Mobile Crisis service access, quality, and outcomes and to take a lead role on quality improvement activities. DCF also charges the PIC with taking the lead on practice development and outcomes evaluation activities.

The FY2016 Annual Report summarizes results from Mobile Crisis data entry into the Provider Information Exchange (PIE), DCF's web-based data entry system, as well as other activities and results relevant to Mobile Crisis implementation. **This year, Mobile Crisis continued to demonstrate strong results in service access, quality, outcomes, and workforce development.** Achievement of positive results is due to strong collaborations among various partners including DCF, Mobile Crisis providers, the PIC and its subcontractors, 211-United Way, the Connecticut Behavioral Health Partnership (CT BHP), KJMB Solutions, family members and advocates, and other partners and stakeholders.

This Executive Summary reviews data and activities from Fiscal Year 2016 (FY2016; July 1, 2015 to June 30, 2016), and when appropriate, includes comparisons to previous years. The report is organized according to the following sections:

- Call and Episode Volume
- Characteristics of Children and Families Served
- Performance Measures and Quality Improvement
- Standardized Training and Technical Assistance
- Collaboration among Mobile Crisis Intervention Services Partners
- Model Development and Promotion
- Goals for Fiscal Year 2017

Call and Episode Volume

In FY2016, there were 16,789 calls to 211 requesting crisis intervention, which is 0.9% higher than FY2015 (16,644), 6.7% lower call volume than FY2014 (18,002), 7.8% higher than FY 2013 (15,574 calls), 21.5% higher than FY 2012 (13,814 calls), 36.9% higher than FY2011 (12,266 calls), 65.7% higher than FY2010 (10,135 calls), and 235.8% higher than FY2009 (estimated 5,000 calls). Of the 16,789 calls this year, 12,419 resulted in Mobile Crisis episodes of care, a 0.5% decrease from FY2015 (12,478). In FY2016, 74.0% of calls were sent to Mobile Crisis Intervention Services for response, compared to 74.9% in FY2015.

Characteristics of Children and Families Served

Demographic Characteristics

For all Mobile Crisis episodes, data were entered into PIE to capture demographic characteristics, case characteristics, and clinical functioning characteristics of the youth and families that were served.

Gender: Among all Mobile Crisis episodes of care, 51.6% were for boys and 48.4% were for girls.

Age: The highest percentage of children served by Mobile Crisis were 13 to 15 years old (35.0%) and 9 to 12 years old (26.4%). An additional 23.0% of children were 16 years old or older and the remaining 15.6% of children were 8 years old or younger.

Ethnic Background: Most families (69.1%) reported non-Hispanic ethnicity. Of the 30.9% of children from a Hispanic ethnic background, most reported their ethnicity as "Hispanic/Latino" (18.8%) or "Puerto Rican" (9.4%).

Racial Background: Many children served by Mobile Crisis reported "White" (58.1%) racial background, followed by "Black/African-American" (21.3%), and "Other Race" (18.0%).

Health Insurance Status: **Most children served by Mobile Crisis were covered by public insurance sources** including Husky A (64.7%) and Husky B (1.1%). Private insurance coverage was reported for 29.2% of youth served and about 2.6% of children served by Mobile Crisis this year had no insurance coverage, which is the same as FY2015 (2.6%).

Temporary Assistance for Needy Families (TANF) eligibility: Statewide, **46% of children were eligible for TANF**. Across all 14 Mobile Crisis sites, the percentages of TANF eligible families served ranged from 30% (CHR/MiddHosp-EMPS) to 60% (CFGC-EMPS).

Case Characteristics

Referral Source: **Most children were referred by parents or family members (43.0%), schools (39.7%), or emergency departments (8.6%)**. Compared to FY2015, a slightly higher percentage of youth were referred from schools, while the percent referred from self/family and emergency departments was slightly lower.

Mean Mobile/Office Visits: In FY2016, the average Mobile Crisis episode included 2.15 sessions. The average number of mobile sessions per episode was 2.07 sessions (range 1.12 to 3.11 sessions across 14 Mobile Crisis sites). The average number of in-office sessions was 0.08 sessions (range 0.00 to 0.49 sessions across 14 Mobile Crisis sites). Consistent with the Mobile Crisis model and practice standards, all 14 Mobile Crisis provider sites had a higher average number of mobile sessions per episode than office sessions. Compared to FY2015, there was a slight decrease in the mean number of mobile sessions and office visits per episode of care.

Length of Stay (LOS): In FY 2016, the median LOS was 19.0 days, and the mean LOS was 22.6 days among discharged episodes of care coded as "Stabilization Follow-Up." The mean LOS was slightly longer than the last few years (20.8 days in FY2015, 21.5 days in FY2014, 20.3 days in FY2013, 22.1 days in FY2012, 24.5 days in FY2011, and 26.4 days in FY2010). In FY2016, Mobile Crisis providers continued to manage LOS and ensure that data on start and end dates were accurately entered into PIE. These efforts resulted in **10% of episodes exceeding the 45 day LOS benchmark** for "Stabilization Follow-up" episodes, which exceeds the 5% benchmark. This was an increase from FY2015 (7%) and higher than results in FY2014 (7.0%), FY2013 (5.0%) FY2012 (6.0%), and FY2011 (7.0%), but lower than FY2010 (11.6%). In FY2016, the median LOS for episodes coded as "Face-to-Face" was 3.0 days, and for "Phone Only" episodes the median LOS was 0 days.

Clinical and Functional Characteristics at Intake

Primary Presenting Problems: The six most common primary presenting problems at intake were **Harm/Risk of Harm to Self (29%); Disruptive Behavior (26%); Depression (13%); Harm/Risk of Harm to Others (8%); Anxiety (6%)**; and **Family Conflict (5%).** All other presenting problems combined accounted for 13% of referrals. These percentages are very similar to FY2015 and FY2014.

Diagnosis: In FY2016, the primary diagnoses at intake were restructured according to new DSM-5 guidelines. The five most common primary diagnoses at intake were Depressive Disorder (28.5%); Adjustment Disorder (17.5%); Conduct Disorders (12.2%); Attention Deficit/Hyperactivity Disorder (10.5%); and Anxiety Disorder (8.0%).

Trauma exposure: Statewide, **65% of children served by Mobile Crisis reported one or more trauma exposures**, compared to 67% of children served by Mobile Crisis in FY2014, 64% in FY2014, 65% in FY2013, 63% in FY2012, and 61% in FY2011. Across service areas this year, the percentage of youth reporting trauma exposure ranged from 50% (Central area) to 77% (New Haven service area). Among those with trauma exposure, the most common types were disrupted attachment/multiple placements (27%), witnessing violence (23%), being a victim of violence (16%), and sexual victimization (13%).

DCF Involvement: At intake, **most children (82.0%) served by Mobile Crisis were not involved with DCF**, a higher rate than FY2015 (81.0%), FY2013 (81.7%) and FY2012 (76.4%) but a slightly lower rate than FY2014 (82.4%). The most common types of DCF involvement at intake were CPS in-home services (6.5%), CPS out-of-home services (4.0%), and the Voluntary Services program (1.2%). These rates are similar to results from FY2015.

Juvenile Justice Involvement: Statewide, 4.5% of children served by Mobile Crisis had been arrested in the six months prior to the Mobile Crisis episode, slightly lower than FY2015 (5.1%). It is also lower than FY2014 (5.4%), an increase from FY2013 (2.5%), but lower than FY2012 (6.8%) and FY2011 (7.9%). Moreover, 1.5% of youth were arrested during the Mobile Crisis episode, which is about the same as FY2015 (1.4%).

School Issues: Across the state, the top four issues at intake that had a negative impact on the youth's functioning at school were emotional (32%), behavioral (25%), social (23%), and academic problems (19%). Statewide, 16% of youth served by Mobile Crisis had been suspended or expelled in the six months prior to the Mobile Crisis episode.

Alcohol and Other Drug (AOD) Use Problems: In terms of lifetime prevalence of AOD use, 0.5% reported alcohol use, 5.0% reported other drugs, and 2.5% reported both alcohol and other drug use.

Emergency Department and Inpatient Hospital Utilization: Statewide, 8.6% of all referrals to Mobile Crisis came from hospital EDs, compared to 9.2% in FY2015, 10.6% in FY2014, 10.1% in FY2013, 11.2% in FY2012, and 12.0% in FY2011. In addition, in FY2016, 17% of episodes were evaluated in an ED one or more times during the current Mobile Crisis episode of care, compared to 17% in FY2015, 20% in FY2014, 17% in FY2013, 14% in FY2012, and 15% in FY2011. In addition, 8% of Mobile Crisis episodes experienced an inpatient admission, which was 1% higher than FY2015 (7%).

Performance Measures and Quality Improvement

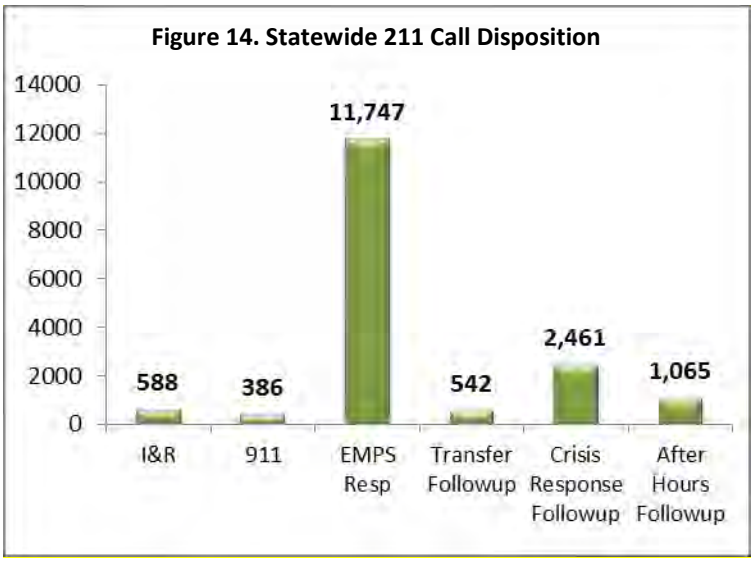
In FY2016, the PIC worked with collaborators to produce monthly reports, quarterly reports, and this annual report summarizing indicators of access, service quality, performance, and outcomes (visit www.chdi.org or www.empsct.org for all reports). Site visits were conducted with providers and performance improvement plans were developed with the six primary service area teams and, when applicable, their satellite offices or subcontractors. Individualized consultation helped Mobile Crisis providers identify best practice areas and areas in need of improvement and develop strategies for addressing areas in need of improvement. Primary indicators of service access and quality were the focus of many sites' performance improvement plans, but sites increasingly examined other indicators of service and programmatic quality

including clinical and administrative processes. During FY2016 there were a total of 83 performance improvement goals developed. Of those goals, 28% were achieved and an additional 64% of the goals saw improvement. Only 8% of goals developed had no positive progress (see Table 12 for a summary of sites' performance improvement plans).

Data on performance measures and quality improvement activities are reviewed below along with clinical outcomes and special data analysis requests in FY2016.

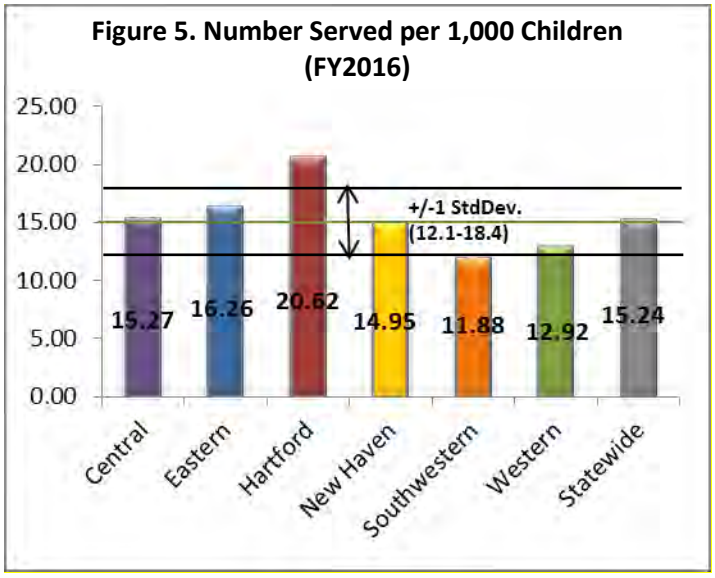
Call Volume: **In FY2016, there were 16,789 calls to 211 and Mobile Crisis for crisis intervention,** which is 0.9% higher than FY2015, 6.7% lower call volume than FY 2014 (18,002 calls). These calls resulted in **12,419 Mobile Crisis episodes of care,** 0.5% less than FY2015. Most calls (74.0%) were transferred to a Mobile Crisis provider for a response, which is about the same as FY2015 (74.9%) and higher than FY2014 (64.2%) and FY2013 (69.7%), but slightly lower than FY2012 (76.5%) and FY2011 (77.2%). In addition 14.7% of calls in FY2016 were sent to Mobile Crisis for crisis response follow-up and 6.3% were transferred to Mobile Crisis for after-hours follow-up. The remaining calls were handled by 211 only as information and referral (3.5%) or as transfers to 911 (2.3%).

Figure 14. Statewide 211 Call Disposition



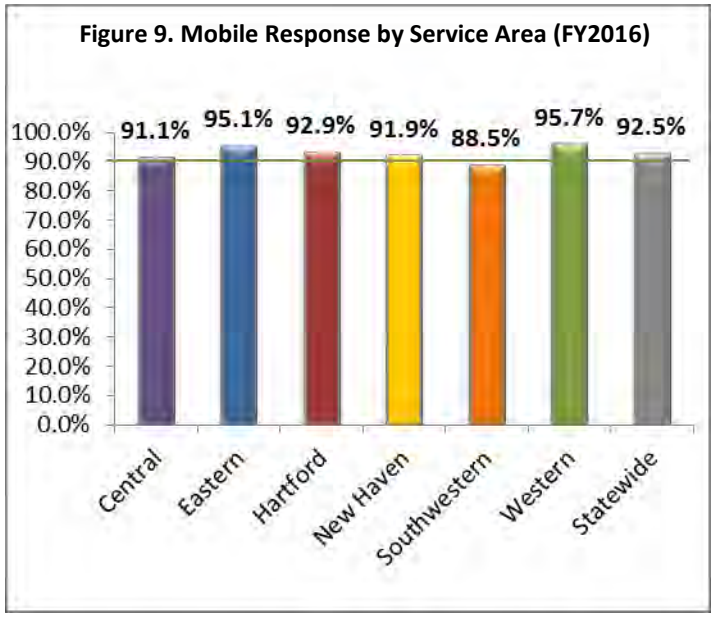
A "service reach rate" examines total episodes relative to the population of children (based on 2010 U.S. Census data) in a given catchment area (see figure below). Service reach rates are calculated statewide, for each service area, and for each individual provider. The statewide service reach rate for FY2016 was 15.24 per 1,000 children compared to 15.31 episodes per 1,000 children in FY2015, 15.19 in FY2014, 13.25 in FY2013, 12.97 in FY2012, and 11.23 in FY2011. The Hartford service area had the highest service reach rate (20.62 per 1,000 children) which was more than 1 standard deviation above the statewide mean. The lowest service reach rate was in the Southwestern service area (11.88 episodes per 1,000), which was less than one standard deviation below the statewide mean.

Figure 5. Number Served per 1,000 Children (FY2016)



Mobility Rate: Mobile responsiveness is a key feature of Mobile Crisis service delivery. Since PIC implementation, the established mobility benchmark has been 90%. The Mobile Crisis PIC examines all episodes for which 211 recommended a mobile or deferred mobile response and determines the percentage of those episodes that actually received a mobile or deferred mobile response from a Mobile Crisis provider. **In FY2016, the statewide mobility rate was 92.5%** which was above the 90% benchmark. The statewide mobility rate this year was one of the highest recorded mobility rates since FY2009 [FY2015 (92.4), FY2014 (91.7%), FY2013 (91.9%), FY2012 (92.5%), FY2011 (90.3%), FY2010 (83.6%), and FY2009 (estimated at 50%)]. **Five of six service areas had an annual mobility rate above the 90% benchmark.** The highest rate was in the Western region (95.7%) and the lowest was in the Southwestern service area (88.5%). The range in mobility rates across all six service areas was 7.2 percentage points which was higher than FY2015 (4.1 percentage points), lower than FY 2014 (8.1 percentage points) and FY2013 (9 percentage points), but higher than FY2012 (3.7 percentage points). Continued year-to-year increases in Mobile Crisis utilization rates impacts sites' ability to respond to requests for mobile response; however, the Mobile Crisis added clinicians to its network of providers in FY2016 and continues to respond to this challenge with excellent overall mobility.

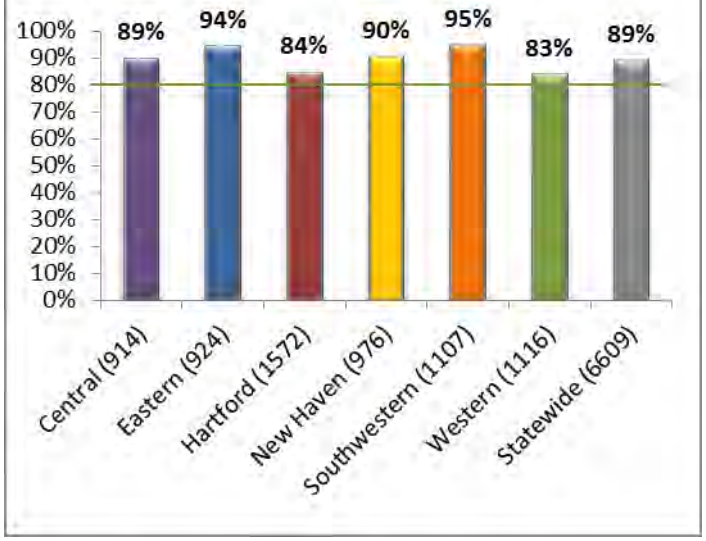
Figure 9. Mobile Response by Service Area (FY2016)



Response Time: The benchmark for response time is that at least 80% of all mobile responses will be provided in 45 minutes or less. **For the second consecutive year, 89% of all mobile responses were made within the 45 minute**

benchmark, the highest annual rate achieved to date (FY2014 (87%), FY2013 (88%), FY2012 (85%), FY2011 (86%), and FY2010 (62%)). All six service areas achieved the benchmark, with service area performance ranging from 95% (Southwestern) to 83% (Western). **The median response time this year was 25 minutes, which was two minutes less than FY2015**. Statewide response time performance has been consistently above expectations the last four fiscal years despite growth in episode volume.

Figure 11. Total Mobile Episodes with Response Time Under 45 Minutes (FY2016)



Clinical Outcomes

Ohio Scales: The Ohio Scales are intended to be completed at intake and discharge by parents and Mobile Crisis clinicians, typically for stabilization follow-up episodes in which children and families are seen in person for multiple sessions over a timeframe of up to 45 days. Statewide, 3,102 clinician-report and 300 parent-report Ohio Scales were completed at intake and discharge. **In FY2016, Mobile Crisis clinicians completed the Ohio Scales for 84% of episodes at intake and 86% at discharge.** Clinician completion rate at intake were slightly lower than FY2015 (85%) but rates at discharge were higher than FY2015 (84%). In FY2016, **parents completed the Ohio Scales at the rate of 50% at intake and 8% at discharge,** both of which were lower than FY2015. Although factors such as call volume and unplanned discharges can negatively impact Ohio Scales completion rates, these results are below expectations for ensuring the availability of accurate and complete outcomes data.

Even though the Ohio Scales were designed to assess treatment outcomes for longer-term models of intervention such as outpatient care, pre-post changes indicate **statistically significant and positive changes on all domains of the Ohio Scales** (see Table 4) at the statewide-level. It is important to note that low completion rates (especially for parent-report measures at discharge) present a potential threat to the validity of these results.

Examining "clinically meaningful change" is another way to view Ohio Scales results. Clinically meaningful change on the Ohio Scales Functioning scale is a change of at least 8 points and a score of 50 or higher at discharge; and on the problem severity scale, a change of at least 10 points and a score of 25 or lower at discharge. Using these definitions, there was clinically meaningful change on Functioning for 16.2% of youth according to parent-report and 7.1% of youth according to clinician-report. There was clinically meaningful change on Problem Severity for 16.3% of youth according to parent-report and 8.5% of youth according to clinician-report.

Table 1. Statewide Ohio Scale Scores (based on paired intake and discharge scores)	**N**	**Mean (intake)**	**Mean (discharge)**	**t-score**	**Sig.**	**% Clinically Meaningful Change**
Parent Functioning Score	302	42.61	46.09	5.52	p < .000	16.2%
Worker Functioning Score	3115	43.27	45.15	17.44	p < .000	7.1%
Parent Problem Severity Score	300	26.72	23.35	-4.96	p < .000	16.3%
Worker Problem Severity Score	3102	28.89	26.22	-22.45	p < .000	8.5%

Special Data Analysis Requests

The Mobile Crisis PIC examined PIE and other data submissions and answered a number of important questions related to Mobile Crisis service delivery, access, quality, outcomes, and systems-related issues. Many of these special data requests were generated throughout the year in response to questions from DCF, Mobile Crisis providers, and other stakeholders. This information was used to shape Mobile Crisis practice as well as systems-level decision-making. Several examples are described below.

Results Based Accountability (RBA): Historically, the Mobile Crisis PIC has helped identify appropriate indicators for RBA reporting and has reported on these indicators in the annual report. In Q2 FY2016, Mobile Crisis PIC integrated the RBA report card into quarterly reports to enhance the capacity for DCF and statewide stakeholders to monitor performance on a more regular basis.

Racial and Ethnic Disparities in Mobile Crisis Utilization: During FY2016, Mobile Crisis PIC examined potential racial and ethnic disparities in service delivery and access. The analysis revealed that 35.7% of children served were white non-Hispanic, 13.2% were Black or African American non-Hispanic, and another 27.2% were Hispanic-any race. The data showed 35.8% of Mobile Crisis users were between the ages of 13-15 years old, followed by 16-19 year olds at 25.3%. Up to age 12 males were the highest utilizers of Mobile Crisis, particularly among Black or African American children who after the age of 12 saw a rapid decline of Mobile Crisis utilization. This data highlighted the importance of ensuring access to EMPS among diverse populations of youth, and providing culturally relevant services.

Mobile Crisis and School Referral: This report examined referrals made from schools to Mobile Crisis. The results indicated that there were 5,286 school referrals to 211 from July 1, 2014 to June 11, 2015. Of the total number of referrals made, 81.9% resulted in a Mobile Crisis episode of care. The statewide mobility for school referrals was 96.4% and 91.7% of episodes of care that resulted from a school referral has a response time of 45 minutes or less. The cities with the most school referrals in each service area included Middletown (Central Region), Meriden (Eastern Region), Hartford (Hartford Region), New Haven (New Haven Region), Bridgeport (Southwestern Region), and Waterbury (Western Region). For each of these cities, the mobility rate for school referrals to Mobile Crisis exceeded the 90% benchmark. In addition, each city was above the 80% benchmark for response times under 45 minutes, ranging from 90.2% (Waterbury) to 96.3% (Bridgeport). Median response time for school referrals in these cities ranged from 14 minutes (Middletown) to 29.5 minutes (Meriden).

Mobile Crisis Analyses Supporting Related Initiatives: Mobile Crisis data analyses were conducted to support two related initiatives taking place in select Connecticut communities. School referrals to Mobile Crisis and episode-level data were examined to support the School Based Diversion Initiative (SBDI) and Connecticut Department of Mental Health and Addiction Services Safe Schools/Healthy Students Diffusion Project.

Advancing Quality Improvement Standards: The Mobile Crisis PIC examined benchmarks (e.g., mobility, response time) disaggregated by referral source, at the statewide, service area, and provider levels. This allowed sites to assess areas for quality improvement among subgroups of Mobile Crisis recipients.

Hourly Breakdown of Mobile Crisis Utilization: In order to inform possible changes to Mobile Crisis hours of mobility, the Mobile Crisis PIC analyzed the time of day of 211 calls that resulted in a Mobile Crisis episode, using data from FY2014 and FY2015. The findings from this analysis indicated that 5.2% of 211 calls that resulted in a Mobile Crisis episode occurred between 10:00 pm to 8:00 am. The results from FY2014 and FY2015 helped inform the decision to expand Mobile Crisis mobile hours, effective March 1, 2016, to 6:00 am to 10:00 pm on weekdays.

Standardized Workforce Development and Technical Assistance

The Mobile Crisis PIC is responsible for designing and delivering a standardized workforce development and training curriculum that addresses the core competencies related to delivering Mobile Crisis services in the community. Providers are required by contract to ensure that their clinicians attend these trainings. CHDI contracts with Wheeler Clinic's CT Clearinghouse to coordinate the many logistics associated with implementing training events throughout the year. There were ten regular training modules and two special training modules offered in FY2016.

The 10 regular training modules included:

1. 21st Century Culturally Responsive Mental Health Care
2. Crisis Assessment, Planning and Intervention
3. Disaster Behavioral Health Response Network
4. Emergency Certificate Training
5. Strengths-Based Crisis Planning
6. Overview of Intellectual Development Disabilities and Positive Behavioral Supports
7. Traumatic Stress and Trauma-Informed Care
8. Violence Assessment and Prevention
9. Question, Persuade and Refer
10. Columbia Suicide Severity Rating Scale

The 2 special modules included:

1. Adolescent Screening, Brief Intervention and Referral to Treatment (A-SBIRT)
2. Applied Suicide Intervention Skills Training (ASIST)

Evaluation forms indicated that participants were generally highly satisfied with the training modules and that the learning objectives were consistently met. Evaluation findings continue to be used to inform changes for FY2017. Highlights from the Mobile Crisis PIC training component include the following:

- 38 training modules were held, including A-SBIRT and ASIST which were offered as special trainings
- There were 177 Mobile Crisis training participants in FY2016
- There have been 220 trainings in the seven years of Mobile Crisis PIC implementation, involving 443 Mobile Crisis staff members that have completed one or more trainings during that time.

In addition to these formal workforce development sessions, Mobile Crisis providers also received periodic consultation and technical assistance to address data collection and entry issues; for using data to enhance Mobile Crisis access and service quality; and to inform management and clinical supervision. In our efforts to reduce redundancy in content and increase efficiency of delivering the training curriculum, especially in light of continued high episode volume, we offered Columbia Suicide Severity Rating Scale (CSSRS) as an online training module. In fiscal year 2017, CSSRS will continue to be offered as an online training and we will offer a train-the-trainer module for Question, Persuade and Refer (QPR).

Collaborations among Mobile Crisis Partners

There were numerous collaborations among DCF, the Mobile Crisis PIC, Mobile Crisis provider organizations, the Connecticut Behavioral Health Partnership (CTBHP), 211-United Way, FAVOR, and other stakeholders. Activities in this area include:

- *Monthly Meetings*: Monthly meetings include representatives from the Mobile Crisis PIC, DCF, Mobile Crisis managers and supervisors, 211-United Way, the CTBHP, and other stakeholders. The meetings are held to review Mobile Crisis practice and policy issues.
- *The School Based Diversion Initiative (SBDI)*: SBDI is a school-based initiative that seeks to reduce rates of school-based arrest, expulsion, and out of school suspension through professional development, revisions to school disciplinary policies, and access to mental health services and supports in the school and community. The initiative emphasizes enhanced school utilization of Mobile Crisis as a "front end" diversion to school-based arrest, which disproportionately affects students with behavioral health needs.
- *Client and Referrer Satisfaction*: 211-United Way and the Mobile Crisis PIC worked together to measure and report family and referrer satisfaction with Mobile Crisis services.
- *Workforce Development Enhancement:* The Mobile Crisis PIC, CT Clearinghouse, DCF, and Mobile Crisis personnel collaborated in a Workforce Development committee in FY2015 and recommendations were developed to enhance practical and effective training for all Mobile Crisis clinicians and staff. Upon training completion in FY2015, the Mobile Crisis training modules were reviewed and the group recommended a new online training module, Columbia Suicide Severity Scale, which was offered in FY2016.
- *MOU Development with School Districts*: Mobile Crisis PIC staff provided technical assistance and support to Mobile Crisis managers to develop MOUs with School Districts as one element of Connecticut Public Act 13-178. Staff from 211-United Way sent outreach mailings to school administrators, and the Mobile Crisis PIC facilitated contact between Mobile Crisis providers and school personnel. Staff from 211-United Way posted MOA information and signed MOAs on their website (http://www.empsct.org/moa/). Additionally, a brief Mobile Crisis video highlighting the mutual benefits that students and schools receive by collaborating with Mobile Crisis service providers was developed and disseminated to school administrators.

Model Development and Promotion

Mobile Crisis stakeholders continue to work toward standardized Mobile Crisis practice across the provider network, and to establish Connecticut's Mobile Crisis Intervention Services program as a recognized national best practice. Activities in this area are summarized below.

Presentations: The Mobile Crisis model and associated findings were presented at local, state, and national meetings and conferences this year. Examples include a presentation to the 29th Annual Research & Policy Conference on Child, Adolescent, and Young Adult Behavioral Health and a national webinar entitled, "Toward Value-Based Care: Service Utilization, Performance Measurement, and Resource Allocation in a Statewide Children's Mobile Crisis Service." In addition, Jeff Vanderploeg (CHDI) and Tim Marshall (DCF) provided expert consultation for the Children's Behavioral Health T.A. Collaborative in their Mobile Response and Stabilization Services initiative, held in New Brunswick, NJ. Teams from five states (PA, IL, MI, CO, SC) were present and received consultation on developing or enhancing their own mobile crisis programs. This was followed by additional telephone-based consultation to the state of Michigan, which will be followed by in-person consultation in January 2017. Mobile Crisis and other best- and evidence-based practices were part of DCF"s conference, "Helping Children and Youth Succeed" in June 2016. Mobile crisis was also featured as part of a presentation to the Juvenile Justice Policy and Oversight Council Diversion Workgroup in December 2015. Finally, CHDI worked with DCF to write an Issue Brief titled, "Caring for Children in the Midst of a Behavioral Health Crisis" which featured Mobile Crisis and its positive outcomes over the last several years.

Goals for Fiscal Year 2017

FY2016 was another successful year for Mobile Crisis providers, the Mobile Crisis PIC, and all stakeholders involved in the Connecticut Mobile Crisis Intervention Services. There remain several areas of Mobile Crisis practice requiring further attention. Recommended goals for FY2017 are summarized below.

A. Quality Improvement

Mobile Crisis providers demonstrated very good performance on key indicators related to service volume, mobility, and response times. In FY2017, Mobile Crisis providers will maintain this excellent performance.

1. Continue to maintain volume by engaging in outreach activities, meetings, presentations
2. Continue to focus on reaching schools, local police, and families that may benefit from Mobile Crisis
3. Each service area will post mobility at or above the 90% benchmark
4. Each service area will respond to crises in 45 minutes or less for at least 80% of mobile episodes
5. Increase Ohio Scales completion rates
6. Mobile Crisis providers will submit Performance Improvement Plans each quarter with goals in service access, service quality, and outcomes, as well as goals relating to efficient and effective clinical and administrative practices.

B. Standardized Training

1. Maintain or increase the number of training modules that are led by Mobile Crisis managers or supervisors.
2. Consider alternative training approaches to ensure that clinicians complete all training modules in a timely manner.
    - Implementation of Mobile Crisis Training Institute Week during which time most or all modules will be offered during this lower-volume time of year. This will supplement, not replace, existing offerings.
    - Implementation of a web-based Mobile Crisis training module to improve access and decrease cost for service providers.

C. Developing the Mobile Crisis Clinical Model

1. The PIC will publish one or more papers in peer-reviewed journals and present on Mobile Crisis at local, regional, state, and national conferences.
2. The PIC will work with DCF to provide consultation to one or more states seeking to develop or enhance their state's mobile crisis program
3. Examine the role of EMPS in reducing emergency department utilization among youth presenting with primary behavioral health concerns

D. Support the implementation of Connecticut Public Act 13-178 components that pertain to Mobile Crisis

1. Increase the number of signed MOUs between Mobile Crisis providers and School Districts.
2. Support Mobile Crisis expansion to service area providers' staff by utilizing data to inform how best to increase effective service delivery, including cost-effectiveness analyses, hourly breakdown of Mobile Crisis utilization, and evaluating growth in quarterly service area performance goals.
3. Enhance collaboration between Mobile Crisis and community-based mental health care agencies, school-based health centers, and the contracting authority for each local or regional board of education through the state to improve access to timely behavioral health care for children and youth.

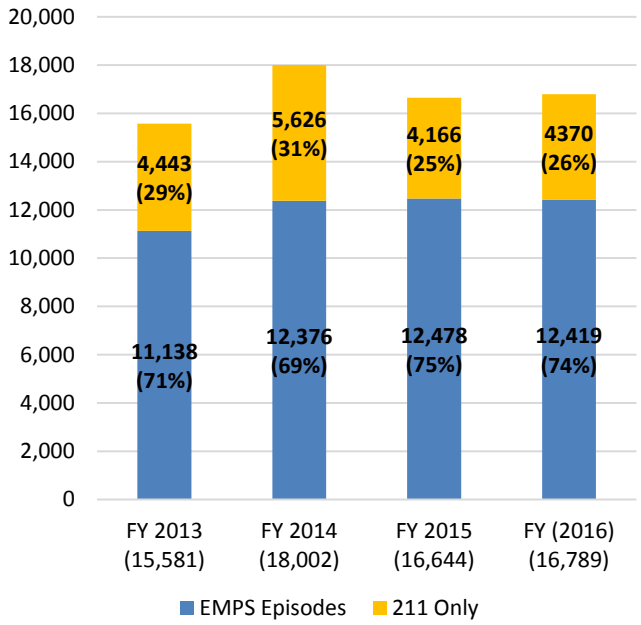
SFY 2016 RBA Report Card: Mobile Crisis Intervention Services

Quality of Life Result: Connecticut's children will live in stable environments, safe, healthy and ready to lead successful lives.

Contribution to the Result: Mobile crisis intervention services are for all Connecticut children and adolescents experiencing a mental health or behavioral crisis. Mobile crisis directly contributes to the result since it supports maintaining the safety and functional stability of children in the home and community. This is done through a rapid face to face crisis response with follow-up involvement and referral to community services as needed. Mobile Crisis provides an alternative, community based intervention, to youth visits to hospital emergency rooms, inpatient hospitalizations and police calls that could remove them from their home and potentially negatively impact their growth and success.

Program Expenditures: Estimated SFY 2016	State Funding: $10,743,631

How Much Did We Do?



Story Behind the Baseline: EMPS mobile crisis intervention services is an important service category in Connecticut's comprehensive service array. In SFY 2016, there were 16,789 total calls made to the 211 Call center, which was 0.9% more than the previous year. The number of EMPS episodes was 0.5% less than SFY 2015 (12,478) but 0.4% higher than SFY 2014 (12,376) and 11.5% higher than SFY 2013 (11,138).

Trend: →

How Much Did We Do?

Episodes Per Child
SFY13-SFY16

2013	DCF Child	Non-DCF Child	Total
1	780 (14.2%)	4699 (85.8%)	5,479
2	156 (19.4%)	647 (80.6%)	803
3	46 (19.9%)	185 (80.1%)	231
4 or more	32 (26.7%)	88 (73.3%)	120

2014	DCF Child	Non-DCF Child	Total
1	757 (13.3%)	4952 (86.7%)	5,709
2	166 (16.9%)	817 (83.1%)	983
3	56 (20.1%)	223 (79.9%)	279
4 or more	36 (22.8%)	122 (77.2%)	158

2015	DCF Child	Non-DCF Child	Total
1	769 (13.9%)	4765 (86.1%)	5,534
2	238 (21.0%)	898 (79.0%)	1,136
3	81 (26.6%)	224 (73.4%)	305
4 or more	66 (31.4%)	144 (68.6%)	210

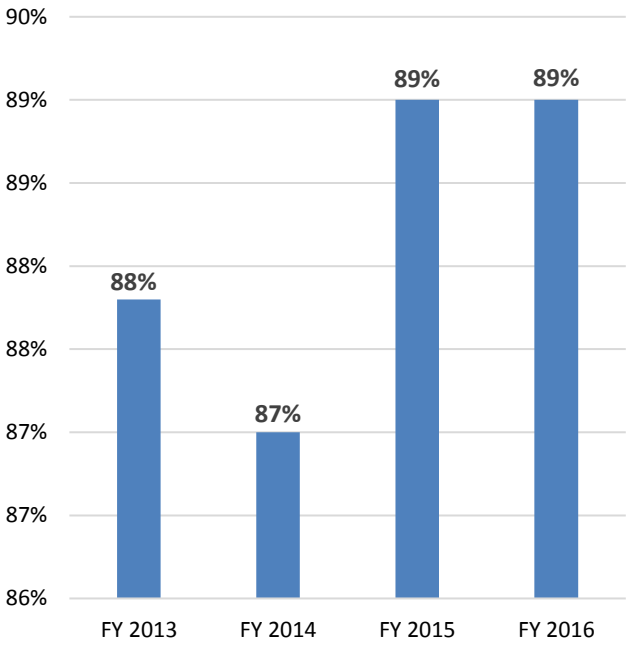
2016	DCF Child	Non-DCF Child	Total
1	792 (14.1%)	4806 (85.9%)	5,598
2	175 (20.4%)	682 (79.6%)	857
3	45 (18.8%)	195 (81.3%)	240
4 or more	47 (32.4%)	98 (67.6%)	145

Story Behind the Baseline: In SFY 2016, of the 6,840* mobile crisis episodes of care 81.8% (5,598) only involved one response per child, and 94.4% (6,455) involved one or two responses; compared to 77.0% (5,534) and 92.8% (6,670) respectively for SFY 2015. The majority of EMPS involvement occurs in one or two episodes indicating the efficiency of EMPS in reducing the need for additional mobile crisis services.

Trend: ↑

How Well Did We Do?

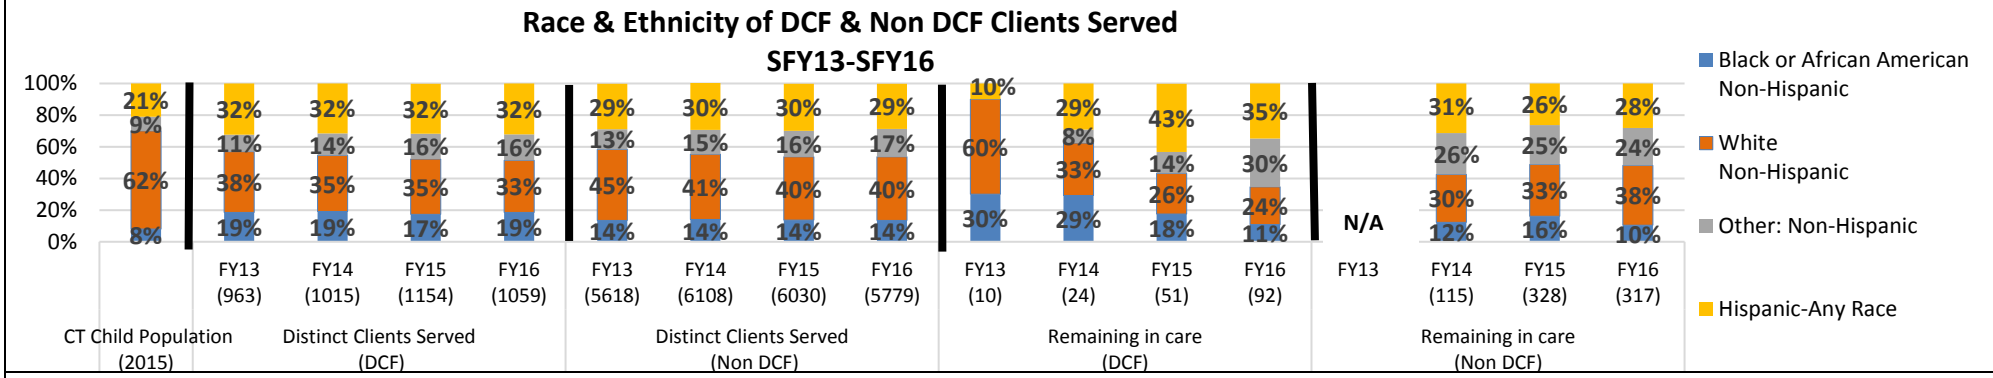
Statewide Response Time Under 45 Minutes
SFY13-SFY16



Story Behind the Baseline: Since SFY 2011 mobile crisis has consistently exceeded the 80% benchmark for a 45 minute or less mobile response to a crisis. For two consecutive years, 89% of all mobile responses were achieved within the 45 minute mark. **The median response time for SFY 2016 was 25 minutes.**

Trend: ↑

How Well Did We Do?

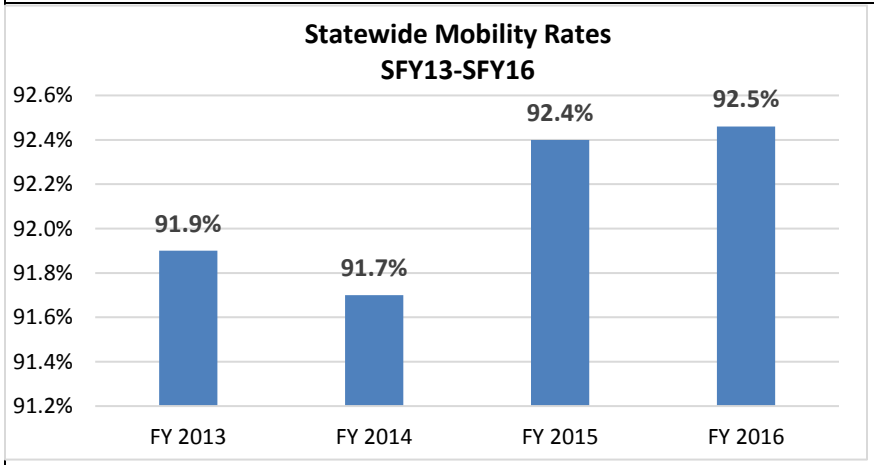


Story Behind the Baseline: The race and ethnicity of non-DCF children utilizing mobile crisis is more consistent with the DCF population of children served, not the statewide child population. Hispanic and Black DCF and Non-DCF involved children[1,2] access mobile crisis services at rates higher than the general population, while white DCF and Non-DCF involved children access the service at lower rates. Both Hispanic and Black DCF involved children utilize mobile crisis at higher rates than Non-DCF children, while the opposite is the case for white children. Non-DCF involved white children had the highest rates for remaining in care[3] at the end of SFY 2016.

[1]Note: Only children that had their DCF or non DCF status identified were reported. [2]Note: For the Distinct Clients served some had multiple episodes as identified above in Episodes per Child [3]Note: Remaining in Care represents an open EMPS episode at the end of the respective fiscal year. [4]Note: For FY2013 there were no data regarding non-DCF children and their remaining in care status.

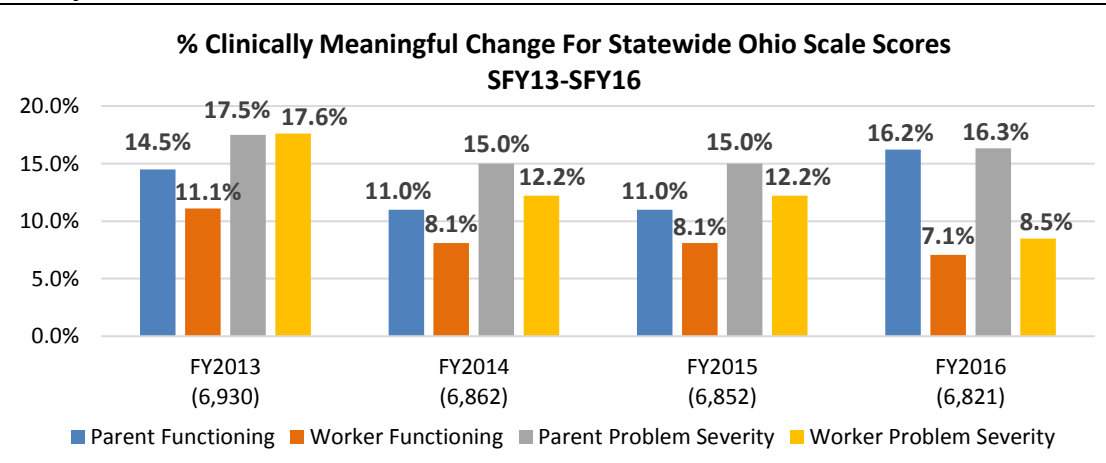
Trend: →

How Well Did We Do?



Story Behind the Baseline: Mobile responsiveness is a key feature of EMPS service delivery. DCF worked with other EMPS stakeholders to establish a 90% mobility benchmark for all contractors. The statewide mobility rate was estimated at 50% prior to re-procurement of the service. In FY2016, the statewide mobility rate was 92.5%. This marks the sixth consecutive year in which statewide mobility has surpassed the 90% benchmark. **Trend:** ↑

Is Anyone Better Off?



Story Behind the Baseline: The Ohio Youth Problems, Functioning, and Satisfaction Scales (Ohio Scales), assessing behavioral health service outcomes has demonstrated clinically significant positive changes for children following a mobile crisis response. The parent ratings for SFY 2016 showed an average 16.2% improvement in child functioning and 16.3% decline in child problem severity following mobile crisis involvement.

Section X: Client & Referral Source Satisfaction

Table 5. Client and Referrer Satisfaction for 211 and Mobile Crisis*

211 Items	Q1 FY2016 Clients (n=75)	Q2 FY 2016 Clients (n=60)	Q3 FY2016 Clients (n=61)	Q4 FY2016 Clients (n=60)	Q1 FY2016 Referrers (n=60)	Q2 FY2016 Referrers (n=60)	Q3 FY2016 Referrers (n=61)	Q4 FY2016 Referrers (n=60)
The 211 staff answered my call in a timely manner	4.61	4.55	4.48	4.58	4.55	4.48	4.46	4.54
The 211 staff was courteous	4.77	4.72	4.68	4.70	4.72	4.65	4.69	4.71
The 211 staff was knowledgeable	4.77	4.70	4.68	4.68	4.70	4.62	4.68	4.71
My phone call was quickly transferred to the Mobile Crisis provider	4.66	4.58	4.53	4.58	4.57	4.52	4.47	4.56
Sub-Total Mean: 211	**4.70**	**4.64**	**4.60**	**4.64**	**4.63**	**4.57**	**4.58**	**4.63**
Mobile Crisis Items								
Mobile Crisis responded to the crisis in a timely manner	4.55	4.55	4.47	4.57	4.58	4.50	4.46	4.53
The Mobile Crisis staff was respectful	4.72	4.72	4.65	4.67	4.70	4.67	4.66	4.69
The Mobile Crisis staff was knowledgeable	4.69	4.58	4.62	4.65	4.65	4.57	4.66	4.63
The Mobile Crisis staff spoke to me in a way that I understood	4.72	4.67	4.63	4.67	X	X	X	X
Mobile Crisis helped my child/family get the services needed or made contact with my current service provider (if you had one at the time you called Mobile Crisis)	4.69	4.57	4.57	4.52	X	X	X	X
The services or resources my child and/or family received were right for us	4.65	4.52	4.47	4.48	X	X	X	X
The child/family I referred to Mobile Crisis was connected with appropriate services or resources upon discharge from Mobile Crisis	X	X	X	X	4.65	4.57	4.61	4.56
Overall, I am very satisfied with the way that Mobile Crisis responded to the crisis	4.72	4.62	4.62	4.62	4.65	4.60	4.64	4.63
Sub-Total Mean: Mobile Crisis	**4.68**	**4.60**	**4.57**	**4.60**	**4.65**	**4.58**	**4.61**	**4.61**
Overall Mean Score	**4.69**	**4.62**	**4.58**	**4.61**	**4.64**	**4.58**	**4.59**	**4.63**

*All items collected by 211, in collaboration with the PIC and DCF; measured on a scale of 1 (Strongly Disagree) to 5 (Strongly Agree)

Client Comments:

*Appreciate the clinician being flexible with our schedule.
*Thanks for taking the time out to talk to us.
*Great service for families.
*Supportive service available to parents and children any time.
*Helpful that I was able to talk with someone over the phone right away.
*I wasn't sure what to do but it was helpful that I could speak with someone for help.
*Thank you for your patience and for speaking with us late at night.
*Helpful to get some guidance on what to do next.
*I had concerns about my daughter and was able to schedule an appointment for later during the day. Thank you.
*End of day/wind down time is typically a struggle. Comforting to know I have a support system to reach out to.
*Called after mobile hours but glad I was still able to speak with a clinician for support.
* I just needed to talk and EMPS was able to right away.
* Good support for parents who have children who won't go to school.
* I was able to speak with someone and didn't wind up needing anyone to come out.
*EMPS couldn't come out right away but once they got into the office someone did. I was still able to speak with someone.

Referrer Comments:

*Great support.
*Thank you for taking the time to speak with me.
*Glad I could call any time of the day/night.
*Helpful to have someone who can respond right away when we need for support.
*Great to know I can consult at any time with EMPS.
*You guys are always helpful. Thanks.
*Good service for consultation.
* Was able to speak with someone late at night for consult/referral. This is helpful.
* Good referral for bridging of services.
*Even though it is summer and school is out for most of us, I appreciate your response and availability.
* Helpful service to have for families.
* Off to the start of a new school year with good support.
*Great service for consultation.
*Responsive and respectful.
*I didn't realize you guys were open earlier and could come out to the school earlier.
*Always helpful to have this referral as support for families.
*Glad to know EMPS starts earlier in the day now.

*Formal outreach refers to: 1) In person presentations lasting 30 minutes, preferably more, using the Mobile Crisis PowerPoint slides and including distribution to attendees of marketing materials and other Mobile Crisis resources; 2) Outreach presentations that are in person that include workshops, conferences, or similar gatherings in which Mobile Crisis is discussed for at least an hour or more; 3) Outreach presentations that are not in person which may include workshops, conferences, or similar gatherings in which the Mobile Crisis marketing video, banner, and table skirt are set up for at least 2 hours with marketing materials made available to those who would like them; 4) The Mobile Crisis PIC considers other outreaches for inclusion on a case-by-case basis, as requested by Mobile Crisis providers.

Appendices

Appendix A: Description of Calculations

Section II: Primary Mobile Crisis Performance Indicators and Monthly Trends

- Figures 1 and 2 tabulate the total number of calls by 211-Only, 211-EMPS, or Registered Calls.
- Figures 3 and 4 calculate the total number of Mobile Crisis episodes for the specified time frame for the designated service area.
- Figures 5 and 6 show the number of children served by Mobile Crisis per 1,000 children. This is calculated by summing the total number of episodes for the specified service area multiplied by 1,000; this result is then divided by the total number of youth in that particular service area as reported by U.S. Census data.
- Figures 7 and 8 determine the number of children served by Mobile Crisis that are TANF eligible out of the total number of children in that service area that are eligible for free or reduced lunch[1]. This is calculated by selecting only those episodes that are coded as face-to-face or plus stabilization follow-up divided by the total number of youth receiving free or reduced lunch[1] in that service area.
- Figures 9 and 10 isolate the total number of episodes that 211 recommended to be mobile or deferred mobile. This number of episodes is then divided by the total number of episodes that the Mobile Crisis response mode (what actually happened) was either mobile or deferred mobile. Multiply this result by 100 in order to get a percentage.
- Figures 11 and 12 isolate the total number of episodes that were coded as Mobile Crisis response mode mobile that had a response time under 45 minutes divided by the total number of episodes that were coded as Mobile Crisis response mode mobile. Response time is calculated by subtracting the episode First Contact Date Time from the Call Date Time. In this calculation, 10 minutes is subtracted from the original response time for the average 211 call.

Section III: Episode Volume

- Figure 13 tabulates the total number of calls by 211-Only, 211-EMPS, or Registered Calls.
- Figure 14 shows the 211 disposition of all calls received by service area.
- Figure 15 shows the 211 disposition Mobile Crisis response by provider.
- Figure 16 show the number served per 1,000 children in the population by provider and uses the same calculation as Figure 5.
- Figure 17 is a stacked bar chart that represents the percent of episodes that have a crisis response of phone only, face-to-face, or plus stabilization follow-up. Each percentage is calculated by counting the number of episodes in the respective category (i.e., phone only) divided by the total number of episodes coded for crisis response for that specified service area.
- Figure 18 calculates the same percentage as Figure 17 and is shown by provider.

Section IV: Demographics

- Figure 19 shows the percentage of male and female children served.
- Figure 20 Age group percentages include only episodes with a Crisis Response of "Face-to-face" or "Plus Stabilization follow-up".
- Figure 21 shows the percentage of children from various ethnic backgrounds.
- Figure 22 breaks out the percentages of the races of children served.
- Figure 23 is calculated by taking the count of each type of health insurance reported at intake, dividing by total count collected for each area and that number is multiplied by 100 for the percent.

[1] United States Department of Agriculture, Food and Nutrition Service, "Eligibility Manual for School Meals, January 2008", http://www.fns.usda.gov/cnd/Lunch/.

- Figure 24 is calculated by taking the count of "yes" TANF responses for each provider, dividing that by the total count answered for each provider and multiplying that number by 100 for the percent.

Section IV: Demographics (continued)

- Figure 25 is calculated by taking the count of each DCF status category reported at intake, dividing by total count collected and that number is multiplied by 100 to get the percent.

Section V: Diagnosis and Clinical Functioning

- Figure 26 shows the percentages for the top six primary presenting problems by service area.
- Figure 27 is calculated by taking the count of each primary diagnostic category reported at intake, dividing by total count collected and that number is multiplied by 100 to get the percent.
- Figure 28 is calculated by taking the count of each secondary diagnostic category reported at intake, dividing by total count collected and that number is multiplied by 100 to get the percent.
- Figure 29 is calculated by taking the count of each primary diagnostic category reported at intake for each site, dividing by total count collected and that number is multiplied by 100 to get the percent.
- Figure 30 is calculated by taking the count of each secondary diagnostic category reported at intake for each site, dividing by total count collected and that number is multiplied by 100 to get the percent.
- Figure 31 shows the percentage of children meeting SED criteria. Serious Emotional Disturbance is defined by the federal statute as applying to a child with a diagnosable mental, behavioral or emotional disorder of sufficient duration to meet diagnostic criteria specified within the Diagnostic and Statistical Manual of Mental Disorders (DSM), and whose condition results in functional impairment, substantially interfering with one or more major life activities or the ability to function effectively in social, familial, and educational contexts.
- Figure 32 is calculated by taking the count of "yes" responses to trauma history at intake filtered on specified service area, a "Crisis Response" of face-to-face or plus stabilization follow-up divided by the total count trauma answered (e.g., yes + no) by service area multiplied by 100.
- Figure 33 is calculated by taking the count of the individual type of trauma filtered on identified service area, "Crisis Response" of face-to-face or plus stabilization follow-up for the episodes that indicated a trauma history divided by the total of yes responses to trauma history by service area multiplied by 100.
- Figure 34 is calculated by taking the number of clients evaluated in an ED 1 or more times for category filtered on "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up for 6 months prior and Plus Stabilization Follow-up for During divided by the total answered for category filtered on "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up for 6 months prior and Plus Stabilization Follow-up for During multiplied by 100.
- Figure 35 is calculated by taking the number of clients admitted (inpatient) 1 or more times for category filtered on "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up for lifetime, 6 months prior and Plus Stabilization Follow-up for During divided by the total answered for category filtered on "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up for lifetime, 6 months prior and Plus Stabilization Follow-up for During multiplied by 100.
- Figure 36 is calculated by taking the number of clients placed in an out of home setting 1 or more times for each category filtered on "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up for lifetime and 6 months prior divided by the total answered for each category using the same filters then multiplied by 100.
- Figure 37 is calculated by taking the number of clients who reported problems with alcohol and/or drugs for each category filtered on "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up for lifetime, 6 months prior and during divided by the total answered for each category using the same filters then multiplied by 100.

Section V: Diagnosis and Clinical Functioning (continued)

- Figure 38 shows the percentages of types of parent/guardian service needs statewide.
- Figure 39 shows the parent reported feeling of capability for dealing with the child's problems at intake and discharge in the state.
- Figure 40 shows the percent of client's suspended or expelled in the six months prior to and during the episode of care. Calculated by using the count answered in each category filtered on "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up for six months prior and Plus Stabilization for During divided by the total number answered filtered on "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up for six months prior and Plus Stabilization for During multiplied by 100.
- Figure 41 shows the parent/guardian rating of client's school attendance during the episode of care compared to pre-admission. The percentages are calculated using the count answered in each category filtered on "Crisis Response" of Plus Stabilization Follow-up divided by the total number answered filtered on "Crisis Response" of Plus Stabilization Follow-up multiplied by 100.
- Figure 42 shows the percentage of school issues that impact the client's functioning at school for intake. This is calculated by taking the count answered in each category filtered on "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up and service area divided by the total number answered filtered on "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up and service area multiplied by 100.
- Figure 43 is calculated by taking the count answered in each category filtered on service area and a "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up for six months prior and Plus Stabilization Follow-up for During divided by the total number answered filtered on service area and a "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up for six months prior and Plus Stabilization Follow-up for During then multiplied by 100.
- Figure 44 is calculated by taking the count answered in each category filtered on service area and a "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up for six months prior and Plus Stabilization Follow-up for During divided by the total number answered filtered on service area and a "Crisis Response" of Face-to-Face or Plus Stabilization Follow-up for six months prior and Plus Stabilization Follow-up for During then multiplied by 100.

Section VI: Referral Sources

- Figure 45 and Table 1 are percentage break outs of referral sources across the state.
- Figure 46 counts the number of ED referrals (i.e., routine follow-up or in-patient diversion) by service area.
- Figure 47 calculates the percent of Mobile Crisis response episodes that are ED referrals by service area. This is calculated by counting the total number of ED referrals for the specified service area divided by the total number of Mobile Crisis response episodes for that service area.
- Figures 48 and 49 use the same calculation as 47 and 48 respectively, but are broken down by provider.

Section VII: 211 Recommendations and Mobile Crisis Response

- Figure 50 is a count of the 211 recommended response mode (i.e., mobile, non-mobile, deferred mobile) by provider.
- Figure 51 is contrasted by Figure 51 that shows a count of the actual Mobile Crisis response mode (i.e., mobile, non-mobile, deferred mobile) by provider.
- Figure 52 and 53 show the percent of 211 recommended response of mobile and non-mobile episodes where the actual Mobile Crisis response was different than the recommended.
- Figure 54 is the same graph as Figure 9.

Section VII: 211 Recommendations and Mobile Crisis Response (continued)

- Figure 55 uses the same calculation as Figure 9 but shows the percent mobile response (mobile & deferred mobile) by provider.
- Figure 56 shows the Mobile Crisis site of the first mobile contact.
- Figure 57 shows the mean of mobile contacts and office visits occurring during an episode of care. This is calculated by figuring the average of all mobile contacts and all office visits occurring during an episode of care.
- Figure 58 shows the reason for a non-mobile Mobile Crisis response.
- Figure 59 shows the Mobile Crisis site of the first non-mobile contact.
- Figure 60 is a visual representation of actual Mobile Crisis responses for each of the 211 recommended response categories for the total number of calls to Mobile Crisis.

Section VIII: Response Time

- Figure 61 is the same graph as shown in Figure 11.
- Figure 62 uses the same calculation as Figure 11 but shows the percent of mobile episodes with response time under 45 minutes by provider.
- Figure 63 arranges the response time for those episodes that are coded as Mobile Crisis response mode-mobile and arranges the response time in ascending order by service area and selects the response time in the middle.
- Figure 64 uses the same calculation as Figure 64 and is categorized by provider.
- Figure 65 arranges the response time for those episodes that were coded as Mobile Crisis response mode -deferred mobile and arranges the response time in ascending order by service area and then selects the response time in the middle.
- Figure 66 uses the same calculation as Figure 66 and is categorized by provider.

Section IX: Length of Stay and Discharge Information

- Table 2 shows the mean, median and percent length of stay statewide, by service area and by provider for both discharged episodes for the current reporting period and cumulative (since January 1, 2010) discharged episodes of care broken into the various crisis response categories (phone only, face-to-face and stabilization plus follow-up). LOS: Phone means Length of Stay in Days for Phone Only. LOS: FTF means Length of Stay in Days for Face To Face. LOS: Stab. Means Length of Stay in Days for Stabilization plus Follow-up. Phone > 1 is defined as the percent of episodes that are phone only that is greater than 1 day. FTF > 5 is defined as the percent of episodes that are face to face that are greater than 5 days. Stab. > 45 is defined as the percent of episodes that are stabilization plus follow-up that are greater than 45 days. Blank cells in the table indicate no data was available for those particular criteria.
- Table 3 shows total number of episodes used to calculate mean, median and percent in Table 2.
- Figure 67 shows the top five reasons for client discharge statewide. To calculate this percentage take the count answered for each category and divide by the total number answered for "Reason for Discharge" then multiply by 100.
- Figure 68 represents the statewide percentages of the top 5 places where clients live at discharge. To calculate the percentage, count of episodes in each category that have a "Crisis Response" of plus stabilization follow-up and have an end date divided by the total count of episodes with a "Crisis Response" of plus stabilization follow-up with an end date with data entered for "Living situation at discharge" multiplied by 100.
- Figure 69 shows percentages for the types of services clients were referred to at discharge. Calculated by taking the count answered in each category, dividing by total count answered and multiplying by 100 to get the percent.

Section IX: Length of Stay and Discharge Information (continued)

- Table 4 shows the number and mean of Ohio Scales scores for paired intakes (filtered for only mobile and deferred mobile responses, as well as, a crisis response of face-to-face or plus stabilization follow-up) and paired discharges (filtered for only mobile and deferred mobile responses, as well as, a crisis response of plus stabilization follow-up). Paired is the number of cases with both intake and discharge Ohio scores. The mean difference for paired cases is also shown which is the mean of paired discharges minus the mean of paired intakes. Any significance of change in the Ohio score is noted next to the mean difference.

Section X: Client and Referral Source Satisfaction

- Table 5 shows the mean outcomes of the client and referral source satisfaction survey collected for 211 and Mobile Crisis. All items are measured on a scale of 1 (strongly disagree) to 5 (strongly agree).
- Figure 70 shows the statewide percent of parent/guardian satisfaction with the mental health services their child received, calculated by taking the count for each category divided by the total answered for the survey and multiplied by 100.
- Figure 71 is calculated by taking the count for each category by service area divided by the total answers to the question and multiplied by 100.

Section XI: Training Attendance

- Table 6 calculates the percent of staff that attended trainings by dividing actual number of trainings over expected number of trainings.

Section XII: Data Quality Monitoring

- Figure 72 calculates the percent of Ohio intake scales by dividing actual over expected. The numerator is calculated by counting the number of Ohio intake scales for only those episodes that have been coded as crisis response face-to-face OR crisis response stabilization plus follow-up AND for those episodes that are coded as Mobile Crisis response mode either mobile OR deferred mobile (what actually happened). This is divided by the total number of expected Ohio intake scales which is calculated by counting the total number of episodes that are coded as crisis response face-to-face OR crisis response stabilization plus follow-up AND for those episodes that are coded as Mobile Crisis response mode either mobile OR deferred mobile (what actually happened).
- Figure 73 calculates the actual percent of Ohio discharge scales by dividing actual over expected. The numerator is calculated by counting the number of Ohio discharge scales for only those episodes that have been coded as crisis response stabilization plus follow-up AND are coded as Mobile Crisis response mode either mobile OR deferred mobile AND has an episode end date. This is divided by the total number of expected Ohio discharge scales which is calculated by counting the total number of episodes that are coded as crisis response stabilization plus follow-up AND are coded as Mobile Crisis response mode either mobile OR deferred mobile AND has an episode end date.

Section XIII: Provider Community Outreach

- Table 7 is a count of community outreach performed by each provider during each quarter.

Appendix B: List of Diagnostic Codes[2] Combined

Adjustment Disorders:

309.0 - Adjustment Disorder w/ Depressed Mood
309.24 - Adjustment Disorder with Anxiety
309.28 - Adjustment Disorder w/ Mixed Anxiety & Depressed Mood
309.3 - Adjustment Disorder with Disturbance of Conduct
309.4 - Adjustment Disorder w/ Mixed Disturbance of Emotions & Conduct
309.9 - Adjustment Disorder Unspecified

Anxiety Disorders:

300.00 - Anxiety Disorder, NOS
300.01 - Panic Disorder without Agoraphobia
300.02 - Generalized Anxiety Disorder
300.21 - Panic Disorder with Agoraphobia
300.22 - Agoraphobia without History of Panic Disorder
300.23 - Social Phobia
300.29 - Specific Phobia

Attention Deficit/Hyperactivity Disorders:

314.00 - Attention Deficit/Hyperactivity Disorder, Predominantly Inattentive Type
314.01 - Attention Deficit/Hyperactivity Disorder, Combined Type
314.01 - Attention Deficit/Hyperactivity Disorder, Predominantly Hyperactive-Impulsive Type
314.01 - Attention Deficit/Hyperactivity Disorder NOS

Bipolar Disorders:

296.40 Bipolar I Disorder, Most Recent Episode Hypomanic
296.40 Bipolar I Disorder, Most Recent Episode Hypomanic, Unspecified
296.4 Bipolar I Disorder, Most Recent Episode Manic, Unspecified
296.41 Bipolar I Disorder, Most Recent Episode Manic, Mild
296.42 Bipolar I Disorder, Most Recent Episode Manic, Moderate
296.43 Bipolar I Disorder, Most Recent Episode Manic, Severe Without Psychotic Features
296.44 Bipolar I Disorder, Most Recent Episode Manic, Severe With Psychotic Features
296.45 Bipolar I Disorder, Most Recent Episode Manic, In Partial Remission
296.46 Bipolar I Disorder, Most Recent Episode Manic, In Full Remission
296.46 Bipolar I Disorder, Most Recent Episode Hypomanic, In Full Remission
296.5 Bipolar I Disorder, Most Recent Episode Depressed, Unspecified
296.51 Bipolar I Disorder, Most Recent Episode Depressed, Mild
296.52 Bipolar I Disorder, Most Recent Episode Depressed, Moderate
296.53 Bipolar I Disorder, Most Recent Episode Depressed, Severe Without Psychotic Features
296.54 Bipolar I Disorder, Most Recent Episode Depressed, Severe With Psychotic Features
296.55 Bipolar I Disorder, Most Recent Episode Depressed, In Partial Remission
296.56 Bipolar I Disorder, Most Recent Episode Depressed, In Full Remission

[2] Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition, Text Revision (DSM-V-TR)", Numerical Listing of DSM-V-TR Diagnoses and Codes, http://www.psychiatryonline.com.

296.6 Bipolar I Disorder, Most Recent Episode Mixed, Unspecified
296.7 Bipolar I Disorder, Most Recent Episode Unspecified
296.8 Bipolar Disorder NOS
296.89 Bipolar II Disorder

Conduct Disorders:

312.34 Intermittent Explosive Disorder
312.81 Conduct Disorder, Childhood-Onset Type
312.82 Conduct Disorder, Adolescent-Onset Type
312.89 Conduct Disorder, Unspecified Onset
312.89 Other Specified Disruptive, Impulse-Control, and Conduct Disorder
312.9 Unspecified Disruptive, Impulse-Control, and Conduct Disorder
313.81 Oppositional Defiant Disorder

Depressive Disorders:

296.2 Major Depressive Disorder, Single Episode, Unspecified
296.21 Major Depressive Disorder, Single Episode, Mild
296.22 Major Depressive Disorder, Single Episode, Moderate
296.23 Major Depressive Disorder, Single Episode, Severe Without Psychotic Features
296.24 Major Depressive Disorder, Single Episode, Severe With Psychotic Features
296.25 Major Depressive Disorder, Single Episode, In Partial Remission
296.26 Major Depressive Disorder, Single Episode, In Full Remission
296.3 Major Depressive Disorder, Recurrent, Unspecified
296.31 Major Depressive Disorder, Recurrent, Mild
296.32 Major Depressive Disorder, Recurrent, Moderate
296.33 Major Depressive Disorder, Recurrent, Severe Without Psychotic Features
296.34 Major Depressive Disorder, Recurrent, Severe With Psychotic Features
296.35 Major Depressive Disorder, Recurrent, In Partial Remission
296.36 Major Depressive Disorder, Recurrent, In Full Remission
300.4 Persistent Depressive Disorder, Dysthymia
311 Other Specified Depressive Disorder
311 Unspecified Depressive Disorder
625.4 Premenstrual Dysphoric Disorder

Diagnosis Due to Medical Condition

293 Delirium Due To another Medical Condition
293.83 Bipolar and Related Disorder Due to another Medical Condition, Manic Features
293.83 Bipolar and Related Disorder Due to another Medical Condition, Manic Hypomanic-Like Episodes
293.83 Bipolar and Related Disorder Due to another Medical Condition, Mixed Features
293.83 Depressive Disorder Due to another Medical Condition, Depressive Features
293.83 Depressive Disorder Due to another Medical Condition, Major Depressive Like Episode
293.83 Depressive Disorder Due to another Medical Condition, Mixed Features
293.84 Anxiety Disorder Due To another Medical Condition

293.89 Catatonic Disorder Due to another Medical Condition
294.1 Major Neurocognitive Disorder Due to another Medical Condition, Without Behavioral Disturbance
294.11 Major Neurocognitive Disorder Due to another Medical Condition, Behavioral Disturbance
294.8 Obsessive-Compulsive and Related Disorder Due to another Medical Condition
294.8 Other Specified Mental Disorder Due to another Medical Condition
294.9 Unspecified Mental Disorder Due to another Medical Condition
310.1 Personality Change Due to another Medical Condition
347.1 Narcolepsy Secondary to another Medical Condition

Obsessive Compulsive Disorder
300.3 Hoarding Disorder
300.3 Obsessive-Compulsive Disorder
300.3 Unspecified Obsessive-Compulsive and Related Disorder
300.7 Body Dysmorphic Disorder
312.39 Trichotillomania (Hair Pulling Disorder)

Psychotic Disorder
293.81 Psychotic Disorder Due to another Medical Condition, Delusions
293.82 Psychotic Disorder due to another Medical Condition, Hallucinations
293.89 Catatonia Associated with another Mental Disorder, Catatonia Specifier
295.4 Schizophreniform Disorder
295.7 Schizoaffective Disorder, Bipolar Type
295.7 Schizoaffective Disorder, Depressive Type
295.9 Schizophrenia
297.1 Delusional Disorder
298.8 Other Specified Schizophrenia Spectrum and Other Psychotic Disorder
298.9 Unspecified Schizophrenia Spectrum and Other Psychotic Disorder

Trauma Disorders
308.3 Acute Stress Disorder
309.81 Posttraumatic Stress Disorder
309.89 Other Specified Trauma and Stressor Related Disorder
309.9 Unspecified Trauma and Stressor Related Disorder
313.89 Disinhibited Social Engagement Disorder
313.89 Reactive Attachment Disorder

Appendix C: Tables

Table 8. Percent Type of Health Insurance at Intake (relates to Figure 23)

	HUSKY A	Private	No Health Insurance	Other	HUSKY B	Medicaid (non-HUSKY)	Military Health Care	Medicare
